## P R E F A C E

This booklet has been prepared by the Orlando Office of the Agricultural Statistical Division, Agricultural Marketing Service, in response to a growing demand for County acreages of the important vegetables crops grown in Florida. Acreages by Counties by crop season are listed and are accompanied by a summary of the seasons total acreage, yield, production, and value. Time and space did not allow the inclusion of the several seasonal summaries, such as fall, winter, and spring, but these may be secured by request.

The bases for these acreage estimates were secured from reports by, and interviews with growers, shippers, marketing association, seedmen, County agricultural agents, railroad representatives and other well informed persons. We would like to take this occasion to acknowledge the help of each person who has contributed to the accumulation of these data, and to thank him accordingly.

Where a County had less than 100 acres of a particular crop, it is included in the miscellaneous column. We wish to emphasize the fact that the acreages listed in this report are estimates of commercial crops harvested, and do not include vegetables grown in home gardens or in small market garden plots adjacent to some of our larger cities. The watermelon acreages do not include plantings made strictly for seed.

J.C.Townsend, Jr.  
Agricultural Statistician.
